EXECUTIVE SUMMARY

The Parliamentary Standing Committee on Economics and Public Administration conducted an oversight workshop on public administration on 12-16 August 2024. The purpose of the workshop was to identify, scrutinise, understand and make appropriate recommendations to address the challenges affecting public administration in Namibia. The workshop was attended by officials from the Office of the Prime Minister, the Office of the Auditor General, the Ministry of Finance and Public Enterprises; the Ministry of Works and Transport; the Ministry of Urban and Rural Development; the Ministry of Industrialisation and Trade; the National Planning Commission; the Anti-Corruption Commission, the Office of the Ombudsman; the Namibian Institute of Public Administration and Management; and the Institute for Public Policy Research.

The workshop focused on key thematic areas such as the design, structure and processes of the public service in Namibia; the interface between political, and administrative roles and its impact on public service delivery; skills development for effective public service delivery; socioeconomic development projects; organizational development and performance management of CEOs and the board of directors of SOEs; the country's industrialization agenda; procurement policy and its implications on public service delivery; affirmative action policy and its impacts on public service delivery; bureaucratic bottlenecks in the public service; public service reform initiatives and innovation; corruption prevention, ethics, integrity; Public-Private Partnerships (PPP) for government projects; digitalisation and accessing public services electronically or online; human rights and administrative justice in the public service; administration and funding for regional and local government projects; and the effective and efficient operation of government properties.

The committee found several issues facing public administration in Namibia and public service delivery and proposed recommendations for immediate implementation by the stakeholders.

1. INTRODUCTION

1.1. The Parliamentary Standing Committee on Economics and Public Administration was established in terms of Articles 59 and 63 (2) (f) of the Namibian Constitution. It is mandated to exercise parliamentary oversight on the Namibian economy and public administration; including the laws, public policies, activities and programs of Offices, Ministries and Agencies, and State-Owned Enterprises that directly or indirectly affect the economy and public administration in the country.

1.2. The Standing Committee on Economics and Public Administration plays the role of parliamentary oversight on the execution and management of government policies and the management of public affairs by the Offices, Ministries, Agencies and State-Owned Enterprises.

1.3. The Standing Committee mainly focused on the economic affairs of the country and very little attention is given to public administration and public service delivery as required in terms of its constitutional mandate.

1.4. Against this background, the Standing Committee conducted a five-day oversight workshop with various stakeholders, under the theme ***Maximising the Potentials for Public Administration, Public Service Management and Public Service Delivery in Namibia.***

2. OBJECTIVES

2.1. The objective of the Workshop was for the Parliamentary Committee on Economics and Public Administration to identify, scrutinise, understand and make appropriate recommendations to address the challenges affecting public administration in Namibia.

2.2. The following is a summary of the presentations that covered a range of topics.

3. SUMMARY OF THE PRESENTATIONS

3.1. PSC: The Design, Structure and Processes of the Public Service in Namibia: Change, Complexities, and Challenges in the Public Service

3.1.1. The Public Service Commission (PSC) performs all functions that relate to human resource management and development policies, compliance with ethical standards, and norms and standards in the recruitment process within the public service.

3.1.2. The major changes to the public service in the past five years include reviewing the code of conduct to strengthen the promotion of ethics and integrity in the

Public Service and the E-declaration of interest (remunerative work outside employment in the Public Service).

3.1.3. Major challenges affecting the public service include the manual management of Human Resources Administration (e.g. recruitment, leave, record management); disharmony of legal frameworks (e.g. Public Service Act 2 of 1980 has been repealed, but some parts are alive and create a challenge in its implementation); Public Service Act, 1995 (Act 13 of 1995) is being amended and it has taken a long time to be finalised; the PSC is required to ensure balanced Structuring within the Public Service, but there is no policy guideline on how to implement it.

3.1.4. In addition, the Affirmative Action (Employment) Act, 1998 (Act No 29 of 1998) does not make provision for balanced structuring. There is non-compliance to the provisions of the legal frameworks by OMAs and RCs and a lack of appropriate M&E tools and methodologies to do an in-depth, systematic and objective assessment of policy implementation and its impact.

3.2. NIPAM: An Exploration of the Interface/Interaction Between Political, and Administrative Roles and Its Impact On Public Service Delivery

3.2.1. The interface between political leadership and management is an important aspect of the machinery of the Government. The interface between political leaders and administrators in Namibia's public sector presents several significant challenges such as:

a) political influence, where political leaders exert substantial influence over administrative processes, potentially leading to decisions based more on political considerations rather than merit or public interest.

b) Lack of policy continuity where changes in political leadership can result in shifts in policy priorities, potentially disrupting ongoing administrative projects and initiatives. This instability may impede long-term planning and implementation efforts.

c) Inadequate resource allocation where political decisions often affect resource distribution. Administrators may face difficulties in managing and utilizing resources efficiently when these resources are allocated based on political considerations rather than need or efficiency.

3.2.1. There are strategies to enhance the interaction between policymakers and policy implementers such as the promotion of cross-sector collaboration between public sector entities, non-governmental organizations, and private sector partners. Cross-sector collaboration also provides additional perspectives and resources, helping to bridge gaps between political and administrative efforts.

3.2.2. There is a need to continue to strengthen the interface between policymakers and policy implementers through various interventions for the successful execution of the mandate of various public institutions and improved public service delivery to the Namibian citizenry.

3.3. NIPAM: Skills Development for Effective Public Service Delivery: How Skills Gap in the Public Service Impacts Service Delivery

3.3.1. Skills development in Namibia's public sector is a key focus area, with various initiatives and institutions working towards enhancing the capabilities of public servants. Skills are required for effective public service delivery. Common skills gap in the Namibian public service and its impact on public service delivery. Strategies to mitigate the impact of skills gaps.

3.3.2. NIPAM has various capacity-building programs at all levels for public servants.

3.4. NPC: Overview of Socioeconomic Development Projects in NDP5: Progress on Development Budget, Capital Projects, and Socioeconomic Strategies and their Impact on Service Delivery

3.4.1. The National Planning Commission (NPC) plays a critical role in planning and guiding the national development agenda of the country. It is also responsible for spearheading and coordinating the preparation and implementation of the Development Budget. This budget encompasses projects related to the acquisition of capital assets, buildings, land, heavy machinery, technical equipment, and the services of contractors and consultants for construction and other development initiatives.

3.4.2. Between the 2017/18 and 2022/23 financial years, the execution of the Development Budget has shown significant improvement, with the implementation rate increasing from 60 per cent in 2020 to 91 per cent in 2023. However, despite this favourable trend, the completion rate of capital projects remains concerning. In the 2021/22 financial year, out of 398 budgeted projects, 397 were ongoing, with only 1 newly initiated and just 28 completed. Similarly,

in the 2022/23 financial year, 400 projects were budgeted, with 398 ongoing and 2 newly initiated, but only 37 were completed. Additionally, since the 2017/18 financial year, 317 projects have been abandoned, and 74 are in a dilapidated condition, whether complete or incomplete.

3.4.3. The misalignment between the execution rate of the Development Budget and the completion rate of capital projects can largely be attributed to inadequate reporting, monitoring, and evaluation. Furthermore, the majority of incomplete, dilapidated, and abandoned projects are concentrated in the social and economic sectors, particularly in education and business parks.

3.4.4. Several challenges have been identified in the implementation of the Development Budget, including projects not being completed within the specified time frame; projects put on hold without the NPC's consent; delays caused by the payment system and procurement processes; failure to submit project progress reports to the NPC; implementation of projects in isolation, without involving RCs and their regional representatives; poor workmanship by some contractors etc.

3.5. Ministry of Finance and Public Enterprises: Organizational Development and Performance Management of CEOs and the Board of Directors of SOEs: Impacts on Service Delivery

3.5.1. Public enterprises play a significant role in the economy, and they are the heart of economic and innovation development. Public Enterprises have been critical in providing sizeable contributions to the GDP, creating jobs, and supplying essential services to citizens, such as light and power, healthcare, water, transportation and education.

3.5.2. Namibia currently owns 81 Public Enterprises. Total Asset Value of Commercial Public Enterprises (CPEs) stands at N$120 billion, liabilities at N$60 billion and net Value Assets at 60 billion. The employment count stands at 25,000. The Public enterprises sector has improved tremendously and has been the catalyst for development in Namibia. However, they are still faced with the following challenges such as historical debts; significant losses; limited Foreign Direct Investments; Corporate Governance violations and non-compliance; inadequate Board competency; lack of accountability; corruption and mismanagement etc.

3.5.3. To address the challenges, the ministry introduced measures such as the appointment of board members through competitive interviews where 50 Boards have been appointed through open interviews, all boards are being advertised in the media and no more automatic board renewals.

3.6. Ministry of Industrialisation and Trade: The Importance of Public Administration in Namibia's Industrialization Agenda: The Progress Made and Challenges

3.6.1. The Ministry of Industrialisation and Trade is responsible for the development and management of Namibia's economic regulatory regime in which the country's domestic and external economic relations are conducted.

3.6.2. It promotes the growth and development of the economy through the formulation and implementation of appropriate policies to attract investment, increase trade, and develop and expand the country's industrial base.

3.7. Ministry of Finance and Public Enterprises: Implementation of Procurement Policy and Its Implications on Public Service Delivery

3.7.1. The Public Procurement Act was operationalized in 2017 after replacing the old Tender Board Act 16 of 1996. The new Act decentralized public procurement to all public entities to procure goods and services within a certain threshold. Beyond the threshold, the Central Procurement Board of Namibia procures on behalf of the public entities. One of the objectives is to promote integrity, accountability, transparency, competitive supply, effectiveness, efficiency, fair dealing, value for money, responsiveness, informed decision-making, consistency, legality and integration in the procurement of assets, works and services.

3.7.2. The Ministry, in line with the Public Procurement Act, has implemented the Code of Good Practice initiatives to enhance market access for local suppliers and SMEs. These initiatives include exclusive preferential procurement of goods and services from local suppliers, as well as preferential procurement of meat from cloven-hoofed animals sourced from the area north of the veterinary cordon fence by entities governed under the Procurement Act that are based in that region.

3.7.3. To further ensure accountability in the public sector's procurement processes, the Ministry introduced a new initiative called the E-Government Procurement

Portal. This portal is designed to enhance transparency and accountability, improve the management of procurement data, and serve as a central hub for all procurement opportunities.

3.7.4. However, there are significant challenges in the implementation of the Procurement Act. These challenges include a lack of compliance by public entities, particularly in the preparation and submission of procurement plans, poor implementation of the Code of Good Practice, and insufficient capacity in governance coupled with weak internal structures. The Public Procurement Unit, responsible for regulatory oversight and policy formulation within the Ministry of Finance and Public Enterprises, is also severely understaffed, with only 15 staff members available to serve nearly 200 public entities. This understaffing has contributed to poor compliance with the Act by public entities.

3.8. Affirmative Action Policy and its Impacts on Public Service Delivery

3.8.1. The Affirmative Action (Employment) Act No. 29 of 1998 was enacted to achieve equal opportunity in employment in terms of Article 10 of the Namibian Constitution. The Act aims to address inequalities in employment by ensuring that designated groups, including racially disadvantaged individuals, women, and persons with disabilities, have equal opportunities in the workforce. The act led to the creation of the Employment Equity Commission, responsible for implementing affirmative action policies across various sectors.

3.8.2. The Act requires employers to take steps and actions to ensure that persons in designated groups enjoy equal employment opportunities at all levels of employment and are equitably represented in the workforce. The Policy focuses on:

a) **Elimination of Discrimination:** Affirmative action seeks to eliminate employment discrimination by setting guidelines that require employers to provide equitable opportunities based on individual needs, rather than treating everyone the same regardless of their background.

b) **Equitable Representation:** Employers are mandated to ensure that persons from designated groups are adequately represented in their workforce. This includes appointing a senior employee responsible for implementing affirmative action, conducting employment situation analyses, and submitting annual reports on compliance.

c) **Preferential Treatment:** The act emphasizes that employers should prefer suitably qualified candidates from designated groups when filling positions, but also stresses the importance of merit, ensuring that only qualified individuals are considered. In terms of Understudy policy, a relevant employer shall, with due regard to the purpose of the AA Act, train a Namibian citizen as the understudy of every non-Namibian citizen employed. The purpose of this provision is primarily to ensure skills transfer.

3.8.3. Based on the analysis of the public service employment, in terms of management cadre between 2015 and 2023, Namibia has made progress in employment equity, the employment composition in management positions increased from 44% male to 59%, while females decreased from 56% to 44%. For the Below management position, the composition shows that women are more in comparison to men. Good progress in skills transfer to the Namibian understudies was achieved. The previously racially advantaged people (white people) are becoming lesser in the Public Service.

3.8.4. In terms of disabled persons, little progress has been made with an increase of 300 persons employed in 2023 compared to 2015. However, persons with disabilities represented only 0.4% of the workforce in 2023 in comparison to the target of 5%. Furthermore, persons with disabilities are mostly employed in unskilled job categories. Although Persons with disabilities continue to gain representation in the workforce, visually impaired, deaf and dumb persons are disadvantaged due to lack of proper facilities to aid them. In addition, sign language is not enforced in all organizations in Namibia.

3.9. Reduction of Bureaucratic Bottlenecks in the Public Service for Efficient Public Service Delivery

3.9.1. Business Process Re-engineering (BPR) was introduced in the Public Service in 2005. BPR is about a fundamental rethinking and radical redesign of business processes to achieve dramatic improvements in critical, contemporary measures of performance such as cost and quality of service.

3.9.2. It aims to improve service delivery by streamlining business processes and automation processes to develop effective customer service delivery; reduce cycle time in the business processes; reduce complexity throughout the process;

build quality throughout the process; and improve the effectiveness and efficiency of the processes.

3.10. Public Service Reform Initiatives and Innovation: Challenges and Success

3.10.1. The Public Service Innovation Policy, launched in 2020, is the cornerstone of our efforts to transform Namibia's public sector. It involves a deliberate and systematic approach to change that enhances the ability of public institutions to respond to the needs of citizens, foster economic growth, and drive social progress.

3.10.2. The policy aims to inculcate a culture of innovation within government institutions, ensuring that public service delivery is efficient, responsive, and adaptive to the needs of our citizens.

3.10.3. The challenges affecting the implementation of the policy include limited feedback and engagement; minimal response from public institutions to memos from the OPM has hindered feedback collection on innovation initiatives and prototypes; there is no adherence to the Implementation Action Plan of the policy; resource constraints have made it difficult to execute the planned non-monetary innovation awards; and organizing the innovation conference has been challenging.

3.10.4. OPM is calling for the creation of Innovation Hubs. The African Union expects governments to establish innovation hubs or labs for incubating and scaling innovations. However, establishing these hubs, whether national, regional, or sector-specific requires significant resources.

3.11. Corruption Prevention, Ethics, Integrity, Governance and Accountability in the Public Service

3.11.1. In terms of the universal legally binding anti-corruption instrument, the United Nations Convention Against Corruption (UNCAC), Namibia has successfully developed and is in the process of implementing its National Anti-Corruption Strategy and Action Plan for 2021 – 2025 (NACSAP).

3.11.2. The Anti-Corruption Commission has conducted Ethics and Integrity training sessions for Public Enterprises and Private Sectors. All Implementing institutions established integrity committees. The ACC has decentralised its services to only four (4) regions, namely in Erongo Region which covers Kunene and Erongo Regions; Otjozondjupa Region which covers Otjozondjupa,

some parts of Kunene Region and Oshikoto; Oshana Region which covers Omusati, Oshana, Ohangwena and Oshikoto Regions; Khomas Region which covers Khomas, Hardap, Karas and Omaheke Regions; and Kavango East Region which covers Kavango - East, West and Zambezi Regions. The ACC will continue to expand in other regions when resources permit.

3.11.3. The country's Corruption Perception Index (CPI) has generally reduced, and the CPI describes corruption as moderate but its impact on socio-economic development (political, security and economic stability) could be devastating if no institutional measures are not put in place.

3.11.4. The successes include the willingness of the public to report corruption; political will manifested by legal powers and resources allocated to the ACC, though not inadequate; successful collaboration with other agencies e.g. Office of the Prosecutor General, Namibian police, Namibia Revenue Agency, Civil Society Organisations; the adoption of the Integrity Committees and continuous capacity building and training in all O/M/As, RC and Local Authorities; and the independence of the ACC.

3.11.5. The challenges in the fight against corruption include a shortage of Regional Offices; delay in the trial; and lack of functional and specialized courts; some sentences in court do not serve as a deterrent, thus not discouraging others from committing the same offence; the implementation of the Whistle-Blower Protection Act (Act. 10 of 2017) delays caused by third parties that have to supply information; the complexity of corruption cases (secret nature of corruption); insufficient budget allocated to the ACC; and lack of dedicated budget for NACSAP; and the lack of an Overarching and comprehensive National Anti-Corruption Policy Framework to Mainstream anti-corruption measures in OMAs and in all sectors of the Namibia society.

3.12 The Perspective of the Auditor General on Internal Audit and Financial Accountability in the Public Service

3.12.1. The Auditor General has the mandate to audit O/M/As, Regional Councils, Local Authorities, and Funds as well as legally assigned Statutory Bodies and report thereon to the National Assembly in terms of the Constitution. The Auditor-General views internal audit as a cornerstone of good governance, essential for ensuring accountability, transparency, and the effective

management of public sector organisations. Internal audits play a critical role in assessing risk management, control processes, and compliance with laws, thereby enhancing an organisation's ability to operate efficiently. However, in Namibia, the internal auditing function appears flawed, as evidenced by widespread public distrust in institutions, frequent non-compliance with procurement and state finance policies, and high levels of corruption and maladministration. These issues highlight a disconnect between the ideal role of internal audit ensuring that public resources are used responsibly and ethically and the current reality, where ineffective audits undermine public trust and governance. This situation underscores the need for stronger, more independent, and objective internal auditing practices to reinforce accountability and restore confidence in public institutions.

3.12.2. Between the 2018/19 and 2022/23 financial years, financial accountability in Namibia's public sector has shown concerning trends, particularly within Offices, Ministries, and Agencies (OMAs). The number of OMAs receiving unqualified audit opinions is a sign of sound financial management. In contrast, qualified audit opinions, which indicate issues with financial reporting, rose from 2 to 8 OMAs. Additionally, there were 2 adverse audit opinions recorded in the 2023/24 financial year, further signalling deteriorating financial practices. While there was a slight improvement with disclaimer audits reducing from 2 to none, the overall trend reflects a decline in financial accountability within OMAs.

3.12.3. Similarly, the state of financial accountability among State-Owned Enterprises (SOEs), regional councils, and local authorities has also deteriorated. Unqualified audits for these entities dropped sharply from 13 to 6, highlighting significant weaknesses in financial governance. Although there has been some improvement in reducing qualified audits from 9 to 3 and adverse opinions from 47 to 32, these figures still indicate persistent and widespread financial management issues. Disclaimers have also improved slightly, declining from 35 to 14, yet these numbers remain worrisome. Furthermore, many OMAs and State-Owned Enterprises (SOEs), regional councils, and local authorities request special extensions, however, this extension tends to be a continuous cycle and a norm which hampers true accountability.

3.12.4. The data reveals a troubling pattern: internal audits, which are crucial for ensuring compliance, accountability, and the proper use of public funds, are not functioning effectively across these entities. The decline in audit quality suggests that internal audit mechanisms are failing to address financial mismanagement, leading to a loss of public trust and a potential risk to the integrity of public financial administration. Strengthening internal audit functions is imperative to reverse these trends and restore accountability in Namibia's public sector.

3.13. Viability of Developing Public-Private Partnerships (PPP) for Government Projects: Progress and Implementation of the PPP Policy in Namibia

3.13.1. The Public-Private Partnership Policy No. 4 of 2017 is an institutional framework to guide the implementation of the PPP in Namibia and the formulation of the PPP Unit to provide analytical support to the Ministry of Finance and the PPP Committee and Minister in the administration of the PPP Policy in terms of issuing regulations, circulars and guidance notes; assisting public entities take to market PPP projects initiatives; and ensuring consistency in the project preparation, and evaluation processes, and that progression in the PPP process meets the principles and requirements of the PPP policy.

3.13.2. A PPP is a contract between a government institution and a private party for the provision of public infrastructure assets and/or services for use by the public. This forms part of alternative procurement by the government for risk sharing and leverage of private sector strength such as funding to enable the government to utilise its limited fiscal space to deliver social services to the public. The PPP is conducted when investments or management is undertaken by the private sector entity for a specified period. It attempts to balance the strengths of both parties, to create a win-win combination. Per the PPP Policy, all major infrastructure projects with a value above N$ 10 million are to be subjected to PPP suitability screening before other procurement methods are explored. The PPP are for mega projects which require large investments that government may not afford alone.

3.13.3. To reduce the burden on the government, the following projects have been appraised for PPP and are in the process of implementation. These include The City of Windhoek 25 and 50 MW Solar Projects, the Ministry of Higher

Education, Technology and Innovation Student accommodations, the Ondangwa affordable Housing project, the Otjiwarongo wastewater treatment and waste to energy plant and the Trans-Kalahari rail project for TransNamib.

3.13.4. Based on the progress and projects initiated under the PPP Policy, there has been little progress in the implementation this may be due to a lack of understanding of the importance of PPP in service delivery and socioeconomic development of the country. Thus, more needs to be done including political willingness, capacity building and awareness across OMAs to ensure effective and efficient implementation of the PPP Policy.

3.14. Digitalisation and Accessing Public Services Electronically/Online: The Extent of Coverage and Access to Online Public Services

3.14.1. The government is accelerating the rollout of key e-governance services at national and regional levels, including functional e-procurement, e-learning, e-health, e-business registration, social protection and civil registration and identification systems. According to the E-Government Development Index (EGDI), Namibia is ranked 15th in Africa and 121 in the world. In terms of web presence, there are more than 58 government websites accessible from www.gov.na.

3.14.2. There are more than 95 Back-office systems utilised by OMAs. The Back Office Systems and Online Service are establishing challenges. There are aged IT infrastructures and job families that are not fit for purpose. There is a lack of skilled staff to build and deploy enterprise and client-facing systems for rapid IT advancements and complex technology. A Digital Government Strategy is being developed with the help of the Government of Estonia.

3.14.3. More challenges such as the high acquisition costs and escalating costs of IT solutions, support and maintenance and important legislation still need to be enacted and sectoral-based legislation and policies adjusted for automation as well as the cybersecurity protection challenges.

3.15. Human Rights and Administrative Justice in the Public Service: The Role of Ombudsman on the Effectiveness of Public Service Delivery

3.15.1. Article 89 (2) and (3) of the constitution provides that the Ombudsman shall be independent and subject only to the Namibian Constitution and the law. No member of Cabinet or the Legislature or any other person shall interfere with

the Ombudsman in the exercise of his or her functions and all organs of State shall accord such assistance as may be needed for the protection of the independence, dignity and effectiveness of the Ombudsman.

3.15.2. The Ombudsman is the bridge between the government and citizens or the public to provide an alternative dispute resolution mechanism. It promotes fairness and accountability in public administration; and provides independent and impartial oversight to the executive arm of government services, particularly public officials.

3.15.3. The Ombudsman office fulfils this mandate by responding to complaints and enquiries from members of the public by conducting investigations of complaints made about regional and local public bodies.

3.16. Administration and Funding for Regional and Local Government Projects: Challenges and Successes

3.16.1. Housing remains a major developmental challenge in Namibia. There is a housing backlog estimated at over 300,000. National Housing Policy aims to service 150,000 plots under the Participatory Informal Settlement Upgrading (PISU) initiative and 130,000 plots under the Sustainable Incremental Greenfield Development (SIGD) program. About 2/3 of the urban population resides in informal settlement areas. The Urban-Rural Migration -Urbanisation increased from 28% in 1991 to 48% in 2016 and 65.5% in 2023. This trend is resulting in a proliferation of informal settlements.

3.16.2. The challenges include an insufficient budget allocation to land servicing capital projects; prolonged procurement processes on average it takes 4 months to procure a consultant and another 4 months to procure a contractor; the non-compliance with procedural procurement processes by Regional Councils (RCs) and Local Authorities (LAs) is resulting in significant delays and/or awarding incompetent service providers, including consultants and contractors; failure by the Services Providers to complete projects on time, e.g. some Mass Housing Development (MHDP) Projects; lack of adequate technical capacities at the RCs, LAs and Ministries; mismatch between the types and pricing of the housing products versus the needs and affordability levels of the large section of the market especially the low to middle-income segments.

3.16.3. In terms of decentralisation of services, the full potential of decentralisation is not yet unlocked; there is resistance to change by delegating ministries and regional councils; shortage of office and residential accommodation; weak institutional frameworks and coordination mechanisms; silo planning, implementation and M&E: central institutions not recognizing and excluding RCs and LAs; structure constraints including imbalances in functions and human resources; overlapping responsibilities and jurisdictional ambiguities, etc.

3.17. The Operation and Condition of Government Buildings, Government Garage and Government Stores: The Challenges affecting the Effective and Efficient operation of Government Properties

3.17.1. The Ministry of Works and Transport is responsible for the implementation of capital building construction projects, management of fixed assets and maintenance of Government buildings and related infrastructure. The Directorate of Maintenance is tasked with the administration and maintenance of all immovable assets of the Government and the provision of services to user Ministries. The Ministry also facilitates the decentralisation of Maintenance Function to the regions. Line Ministries are authorised to create functional maintenance units for basic maintenance of Government buildings.

3.17.2. The challenges include insufficient budget construction of offices, furniture and equipment; lack of coordination of the implementation of capital projects in the regions; some projects have no plans with site reticulations (water supply, sewerage and electrical services); cumbersome procurement process and OMAs procuring without government standard specifications thereby compromising quality, completion of works and payment; there are alleged illegal occupants in government official accommodations etc.

3.17.3. Some OMAs go straight to the Treasury and Cabinet to acquire authorization and to the Attorney-General's office to purchase, donate and exchange government assets without involving the MWT. Some OMAs enter into lease agreements with private landlords without presenting their needs to MWT to address them and acquire office space on their behalf and only come to the Ministry when they are referred back by the Attorney-General.

3.17.4. There are delays related to the processing of payment for the rental of office space on behalf of OMAs when it comes to the procurement process where most Lease Agreements are expired, and the user Ministry continues to occupy the rented premises.

3.17.5. Government Garage is decentralised to eleven (11) centres countrywide Windhoek, Keetmanshoop, Gobabis, Swakopmund, Otjowarongo, Grootfontein, Khorixas, Opuwo, Ondangwa, Rundu and Katima-Mulilo. Government Garage is currently managing a fleet of over 2,800 vehicles. The Ministry is financing a model for fleet replacement over a rolling budget 2024/2025 to 2026/2027 financial year. The Government Garage together with Government Stores and the Treasury are to phase out old vehicles using public auction once treasury approval is granted. They will sell off the assigned vehicles to various POBs at the end of their respective term of office. Revenue generated will be paid into the State Account.

4. COMMITTEE'S MAIN FINDINGS AND DISCUSSIONS

4.1. **Administrative Autonomy** is about self-determination about the nature and level of services to be provided to Parliament. Administrative independence and accountability are best achieved through the establishment of a parliamentary corporate body, such as the Parliamentary Service Commission.

4.2. **Legislative Independence**: The Legislature remains the only Organ of the State without an independent parliamentary service. In the absence of a Parliamentary Service Commission, the condition of service of parliamentary staff is still determined by the Public Service Commission, impacting on finding the required skills for Parliament to perform its constitutional functions i.e. law-making, representation and oversight efficiently and effectively.

4.3. **Gender Disparity Concerns:** The AA policy has resulted in a higher number of women in public service compared to men. This imbalance is becoming a concern, as the policy has exceeded its intended 15-year lifespan without addressing the underlying issues. The AA Policy and the AA Act fall short of addressing the need to combat regionalism, ethnicity, and tribalism during employment and recruitment, mindful of Namibia's demographics and cultural diversity.

4.4. **Public Service Commission's Limited Role:** The Public Service Commission does not exercise its full authority to correct or overrule decisions made by OMAs and RCs

under the AA policy. The policy's prolonged existence has led to unresolved disparities.

4.5. **Vacancy Clearing Challenges:** The process of clearing vacancies for advertisement through the Secretary to Cabinet has created delays in filling vacancies and positions within OMAs and RCs, leading to public service delivery challenges.

4.6. **Discriminatory Employment Practices:** Some vacancy advertisements contain discriminatory requirements, such as the omission of people with disabilities and there are allegations of corruption in regional employment processes. **Wage Bill and Service Delivery:** Efforts to reduce the wage bill have led to the abolishment of positions, negatively impacting public service delivery. Despite these cuts, the government still needs to expand public services, including building schools and clinics.

4.7. **Legislative Amendment Proposals**: Proposals for amending laws should originate from the Executive or those directly implementing them, as they are most aware of the national challenges faced. **Misalignment of Performance Agreements:** The performance agreements of Ministers and Executive Directors are not aligned with existing laws and policies, causing confusion, interference, and duplication of efforts. For example, the performance agreements of Ministers are not aligned with those of the Executive Directors. The agreements of Ministers are based on political commitments while those of Executive Directors are based on Strategic Plans.

4.8. **Underfunding of NIPAM:** NIPAM is underfunded and relies on external sources for financial sustainability. There are proposals to make NIPAM programmes mandatory across all levels of government, though it currently lacks specific tailor-made programmes for the Legislature. NIPAM should also be strengthened and reformed to offer full-time, part-time, distance or online qualifying certificate, diploma and degree courses to public servants. Such reforms will enable NIPAM to provide a service within the 'letter and spirit' of the NIPAM Act, Act 10 of 2010.

4.9. **NIPAM's Leadership Instability:** Persistent leadership instability and lack of funding have contributed to the slow growth of NIPAM.

4.10. **Inadequate Project Execution:** The execution rate of government projects is inefficient, with many projects abandoned due to lack of funds or poor planning and project management. This observation is most prevalent in the education sector, where numerous construction projects have been left incomplete. There is a general public perception and concern of poor management and/or mismanagement, lack of and/or

non-maintenance; and a lax (uncaring) attitude of government property; and infrastructure intended for essential public service delivery.

4.11. **Lack of Monitoring and Accountability:** There is insufficient consultation and site visits to monitor the implementation of government projects at Ministerial levels, leading to abandoned "white elephant" projects. Many projects are not linked to strategic plans, making monitoring difficult.

4.12. **Non-compliance with NPC's reporting requirements**: OMAs and RCs often fail to provide information to the NPC on the progress of capital projects. The NPC Act lacks enforcement mechanisms for compliance.

4.13. **Theft of TransNamib Railway Rails**: The theft of TransNamib railway rails is a growing concern, requiring preventive planning by the NPC, MWT and TransNamib Limited.

4.14. **Delayed National Planning:** The national planning and budgeting process is causing delays in project commencement across regions, as similar projects must be completed in one region before beginning in another. A generalisation of project descriptions such as "nationwide projects" in the Development Budget and re-routing or virementation of funds earmarked from one project to another or one region to another, without consulting the regional council management, in particular, the chief regional officer is also a matter of concern. The top-down approach by NPC and OMAs in the project needs assessment and identification, instead of a bottom-up approach from the Constituency Development Committee, Local Development Committee and Regional Development Committee levels are of great concern, hence NPC and OMAs should close the gaps between the national sphere of government and regional and local government, with regards to development projects.

4.15. **Attracting Technical Skills:** The remuneration of technical staff in the public service needs to be reassessed to attract and retain skilled workers. For example, the IT specialists need to be compensated commensurate with the private sector to attract and retain them in the Public Service.

4.16. **National Planning Policy Gaps**: There is no national planning policy guiding the planning of capital projects. Planning processes are fragmented, with each OMA working in silos. Integrated planning and budgeting are needed, alongside restructuring the NPC to better execute its mandate.

4.17. **NACSAP Implementation Issues**: Agencies and non-state actors have not fully integrated the NACSAP into their strategic and annual plans.

4.18. **Need for National Priority Committee**: A National Priority Committee is needed to review and prioritize projects initiated by OMAs.

4.19. **SOE Profitability and Investment:** While some loss-making State-Owned Enterprises (SOEs) have been turned around by the Ministry of Finance and Public Enterprises, there is still a lack of private investment in local SOEs.

4.20. **TransNamib Railway Modernization:** The upgrading of railway lines by TransNamib should focus on modernizing the railway system, to provide efficient, effective, fast and safe rail-transport services in the country and not just replacing old tracks.

4.21. **Auditing of SOEs**: Some SOEs are audited independently and not by the Auditor General. The Auditor General can only audit entities created under statutes, not those under the Companies Act. The powers of the Auditor-General are limited in the absence of the long-awaited Audit Bill.

4.22. **Re-establishing a National Airline**: Efforts to re-establish a national airline are ongoing.

4.23. **SOE Legal Frameworks:** Some laws governing SOEs lack supporting regulations, hindering their effective management.

4.24. **Affirmative Action and Marginalized Communities**: The Affirmative Action Act does not adequately include marginalized communities. The act is being revised or replaced by The Employment Equity Bill, with upcoming stakeholder consultations.

4.25. **Public-Private Partnerships:** PPPs are focused on mega projects that require large investments beyond the government's capacity.

4.26. **Decentralization Challenges:** The full potential of decentralization has not yet been realized due to resistance to change within delegating ministries and regional councils.

4.27. **Accommodation Shortages:** There is a shortage of office and residential accommodation in certain regions.

4.28. **Peugeot Car Plant Issues:** The Peugeot car plant in Walvis Bay ceased assembly due to non-compliance with SADC's local content requirements. The Ministry of Industrialisation and Trade is working to resolve this issue.

4.29. **Local Production Efforts:** Initiatives to increase local production, such as Food Lovers' Market sourcing 60% of its fruits locally, are ongoing.

4.30. **Business Registration Challenges:** The absence of a one-stop centre complicates the business registration process. The Special Economic Zone is set to replace the EPZ regime, with pilot projects like the school uniform project in Nkurenkuru.

4.31. **NIDA's Operational Concerns:** The Namibia Industrialisation Development Agency (NIDA) faces operational challenges, including high rental fees and underutilized facilities, with some factories abandoned and machinery unused. A core element of the Industrial Policy Implementation and Strategic Framework is the establishment of the Namibia Industrial Development Agency (NIDA) to drive the economic transformation process in close collaboration with the Ministry of Industrialisation and Trade, the private sector, other Ministries, and key stakeholders. The efficiency and effectiveness of NIDA need some critical review, considering the myriad of challenges and weaknesses within NIDA; including the management of industrial parks and SME parks in the country as well as Mangetti Farm – Kavango Cattle Ranch.

4.32. **Charcoal Industry Inequities:** The charcoal industry lacks local involvement beyond basic production, with local communities not benefiting from exports or industry associations.

4.33. **VAT and Customs Fees**: High VAT and customs fees on imported materials are hindering local production and investment in small and medium enterprises.

4.34. **Industrialization Measurement Gaps:** There are no clear standards or measures to assess the level of industrialization. A scorecard is needed, along with an Investment Bill or policy to attract and regulate investment. Coordination around the African Continental Free Trade Area (AfCFTA) is also necessary.

4.35. **Procurement Act Challenges**: The Procurement Act has made the procurement process lengthy and cumbersome, with inadequate structures in OMAs. The Ministry of Finance needs to advocate and lobby public service management for the creation of procurement units in all OMAs.

4.36. **Ongoing Discrimination Issues:** Despite the AA Policy and the AA Act, discrimination based on regionalism, ethnicity and tribalism persists which requires urgent intervention, for nation-building; mindful of Namibia's demographics and cultural diversity. Marginalized groups remain excluded from mainstream job markets, and women are overrepresented in certain roles, indicating reverse discrimination against men.

4.37. **Public Service Reform Implementation:** The implementation of reform initiatives, such as the Performance Management System and Business Process Re-engineering, faces challenges due to a lack of executive commitment.

4.38. **Performance Delivery Unit's Role:** The Performance Delivery Unit in the Office of the President is not fully engaged in monitoring and evaluating projects.

4.39. **Corruption Prevention:** While Namibia's Perception Index describes corruption as moderate, its potential impact is significant if not addressed. The Anti-Corruption Commission's budget has improved since 2020, indicating political will.

4.40. **Development Budget Execution vs. Completion**: Despite a high execution rate for the development budget, the completion rate of capital projects is below 50%, highlighting a lack of proper monitoring and evaluation.

4.41. **Centralized Planning and Monitoring:** Namibia lacks a centralized planning, monitoring, and evaluation system, leading to unviable projects and underutilized buildings. Many OMAs divert development funds for operational use, creating a gap between budget execution and project completion. There is a need for punitive measures to address unauthorized budget virementation.

4.42. **Gender and Disability Representation:** Despite existing policies, men still dominate management positions, while women and persons with disabilities are underrepresented, particularly in skilled roles. Representation of persons with disabilities is notably low at 0.4% of the public service workforce, well below the target of 5%.

4.43. **Affirmative Action Compliance Issues:** Public and private entities struggle with compliance due to a limited understanding of affirmative action policies, insufficient top management support, and a lack of effective monitoring and evaluation mechanisms. The manual nature of current processes further hampers efficient implementation.

4.44. **Human Resource Management Challenges:** OMAs face understaffing due to a mismatch between the education system and job market needs, exacerbated by a lack of effective human resource management plans.

4.45. **Declining Financial Accountability**: Between the 2018/19 and 2022/23 financial years, financial accountability across OMAs, SOEs, regional councils, and local authorities has declined. The number of unqualified audit opinions has decreased, while qualified and adverse opinions have increased, highlighting significant weaknesses in financial governance.

4.46. **Ineffective Internal Audits:** Internal audit functions within OMAs, SOEs, regional councils, and local authorities are ineffective, contributing to financial mismanagement and public distrust.

4.47. **Delays in Audit Accountability:** A pattern of requesting special extensions for audit submissions by OMAs, SOEs, regional councils, and local authorities has become commonplace, undermining accountability and masking financial management issues.

4.48. **The Corruption Perception Index**: The CPI describes corruption in Namibia as moderate, but its impacts could be devastating if no institutional measures are taken. The budget of the ACC has improved significantly since 2020, indicating a political will from the leaders.

4.49. **Capacity of the justice system:** There is a lack of judges, prosecutors and investigators in the fight against corruption contributing to delays in completing cases. At the same time, some unemployed graduates may be qualified to take up such positions. In addition, there are perceptions that the ACC is not entirely independent and does not tackle the "big fish". It therefore needs to conduct education programs for the public to understand its operations.

4.50. **The auditing of government institutions:** Local Authorities are behind with the submission of their audit reports or financial statements, and they keep on requesting extensions. Some outstanding reports date as far as 2016. The relevant Act does not give a limit to the number of extensions an institution may request from the Office of the Auditor General and does not give powers to enforce punitive measures for non-compliance. The powers of the Auditor-General are limited in the absence of the long-awaited Audit Bill.

4.51. **The slow progress of decentralisation:** The decentralisation process is still facing challenges. The power to decentralise certain functions lies with the respective ministers and not with the Minister of Urban and Rural Development. For the decentralised functions, the budget remains with the mother ministries in the national sphere of government and makes the implementation difficult.

4.52. **Government Store**: Most of the Government Stores are redundant because of the Procurement Act, as it has opened up the market for OMAs to procure from private businesses, leaving the Government Store underutilised or abandoned.

4.53. **Digitalization of government services:** the government is struggling to transition from manual work to digital work. This is both for the staff and the end users (the public). There is a lack of skills to utilise e-governance systems. A lot of capacity building is thus needed. In addition, many systems need to be re-engineered to enable digitalisation of services. The IT structures and job families are outdated and cannot accommodate contemporary IT data such as Artificial Intelligence. It is still difficult

and cumbersome to access Websites of some OMAs are still difficult to access for basic information and research purposes.

4.54. **Justice in public service delivery**: The Ombudsman raised concerns over the issue of "*arrest first and investigate later*". This is detrimental to the families and careers of accused persons and may be a serious human rights violation, including overcrowded holding and police cells for trial-awaiting accused persons There are also unnecessary delays in completing cases and violating the rights of the accused. The Ombudsman is concerned about the incompetence and maladministration in public administration, especially at the local authority level. There is a concern about fairness in public administration as the distribution of development and resources is still seen and divided along regional, ethnic and political lines.

5. CONCLUSIONS

5.1. The oversight workshop aimed at assessing the state of public administration in terms of policy execution in Namibia and the implications for public service delivery for socio-economic development. The workshop highlighted significant structural and operational challenges within Namibia's public administration, governance, and legislative processes. The lack of legislative independence between the Legislature and Executive arms of government, gender disparities and lack of inclusivity in terms of persons with disability, and the prolonged application of outdated policies such as the AA policy have created imbalances and inefficiencies across government sectors.

5.2. The PSC's limited authority, coupled with systemic issues such as delayed vacancy clearances, discriminatory employment practices, and misalignment of performance agreements, have further exacerbated service delivery challenges. In addition, the public procurement policy in terms of the length of procurement processes was found to hinder service delivery, there is a lack of compliance and effective monitoring.

5.3. In addition, the workshop highlighted inadequate funding and leadership instability at institutions especially in public enterprises which hinder service delivery and mandate execution efforts. The workshop also reveals gaps in national planning, fragmented execution of capital and development projects, and a lack of effective monitoring and accountability mechanisms, leading to incomplete or abandoned projects.

5.4. Furthermore, the financial management landscape is troubling, with declining accountability and ineffective internal audits, particularly within OMAs and SOEs, also disregarding the efficiency of the Office of the Auditor-General due to limited

powers of the Auditor-General. The persistence of corruption, despite improved ACC budgets, underscores the need for stronger constitutional measures and a more independent, effective and reformed ACC.

6. RECOMMENDATIONS

Given the objectives of the oversight workshop and the findings of the Committee, the following recommendations have been proposed to the different OMAs to ensure effective service delivery and enhance the efficiency of the public administration in Namibia. The Standing Committee on Economics and Public Administration, therefore recommends to the National Assembly as follows:

6.1. **Public Enterprise Performance and Accountability:**

6.1.1. The Ministry of Finance and Public Enterprises (MFPE) should conduct an online public assessment of State-Owned Enterprises (SOEs) to gauge their value and relevance to the public.

6.1.2. The Ministry of Finance and Public Enterprises must strengthen the fiduciary responsibility of SOE board members, holding them accountable for the non-performance of SOEs with particular emphasis on SOEs in the food security sector, such as green schemes. It should be the responsibility of SOE Board Members to ensure their organisations receive adequate support.

6.2. **Ethics, Integrity, and Innovation in Public Service:**

6.2.1. The Office of the Prime Minister (OPM) and the Anti-Corruption Commission (ACC) should ensure all Offices, Ministries, and Agencies (OMAs) establish Integrity Committees to promote workplace ethics, with ethics and integrity included in the induction programs for all new appointees.

6.2.2. OPM should introduce non-monetary innovation awards and recognition programmes and host a national conference to foster innovation across both public and private sectors.

6.3. **Urban Development and Housing:**

6.3.1. The Ministry of Urban and Rural Development (MURD) (custodian of housing) in collaboration with the National Planning Commission (national planner) and the Ministry of Finance and Public Enterprises (national treasury) must allocate consistent budget resources over three years for capital projects focused on urban land and affordable housing development, particularly for first-time homeowners and low-income citizens.

6.3.2. MURD should implement the revised National Housing Policy (2023) and develop an Urban Land Reform Policy to enhance efficient land use and affordable housing options.

6.3.3. Make proposals to the Cabinet to consider the establishment of a Ministry of Land Delivery and Housing Provision to streamline land and housing development efforts.

6.4. **Project Management and Capacity Building:**

6.4.1. NIPAM should develop project management and capacity-building programmes tailored for regional councils and local authorities, ensuring these entities send relevant staff for training to improve project monitoring and delivery.

6.5. **Strengthening and reform of NIPAM**

6.5.1. OPM and NIPAM should strengthen and reform the institute to provide a service within the 'letter and spirit' of the NIPAM Act, Act 10 of 2010, to the extent of offering full-time, part-time, distance or online qualifying certificates, diploma and degree courses to public servants.

6.6. **Public-Private Partnerships and Housing Information**

6.6.1. MURD in collaboration with NPC should explore delivering affordable housing through frameworks like the Public-Private Partnership Act (2017) and implement a Namibia Housing Information System to track land and housing availability.

6.7. **Regional Maintenance and Decentralization:**

6.7.1. The Ministry of Works and Transport (MWT) must engage with O/M/As and RCs to establish Maintenance Units, decentralize the Government Garage function, and enhance budgetary provisions for building and improving Government Garage Centres in underserved regions.

6.8. **Affirmative Action and Inclusion:**

6.8.1. OPM, Public Service Commission and Ministry of Labour, Industrial and Employment Creation must address and find solutions to the limitations of the Affirmative Action Act, Labour Act and Employment Service Act, particularly in combating regionalism, ethnicity and tribalism in recruitment, strengthening cultural diversity and inclusiveness in employment opportunities; mindful of Namibia's demographics and diversity; and ensure penalties for non-compliance are strengthened.

6.8.2. Office of the Prime Minister, Public Service Commission; Ministry of Labour, Industrial and Employment Creation and the Ministry of Education, Arts and Culture Enhance support for persons with disabilities by improving accessibility in education and employment opportunities.

6.8.3. The Office of the Prime Minister, Public Service Commission and Ministry of Labour, Industrial and Employment Creation must review policies to address reverse discrimination against males and ensure balanced support for both the boy and girl child in education and employment opportunities.

6.9. **Develop and Implement a Human Resource Management Plan:**

6.9.1. The Office of the Prime Minister, Public Service Commission, National Planning Commission, Ministry of Education, Arts and Culture, Ministry of Higher Education and Ministry of Labour, Industrial Relations and Employment Creation must develop and implement a comprehensive human resource management plan and policy to align educational outputs with labour market needs, reducing unemployment and ensuring the availability of a skilled workforce for both public and private sector initiatives.

6.10. **Project Planning and Alignment:**

6.10.1. The National Planning Commission, Ministry of Works and Transport, Ministry of Finance and Public Enterprises and Ministry of Urban and Rural Development in collaboration with Regional Councils Local Authorities, and Offices of Governors must ensure that all identified projects are properly aligned with the national budget and high-level planning documents, such as National Development Plans (NDPs) and Vision 2030, to prevent the abandonment of non-viable projects.

6.11. **Monitoring and Evaluation:**

6.11.1. National Planning Commission, Ministry of Works and Transport, Ministry of Finance and Public Enterprises and Ministry of Urban and Rural Development in collaboration with Regional Councils, Local Authorities and Offices of Governors, must:

a) Establish a robust monitoring and evaluation framework for government projects, ensuring regular consultation, site visits, and alignment with strategic plans to prevent the abandonment of projects.

b) Strengthen monitoring and evaluation mechanisms to ensure effective oversight of projects and prevent financial wastage. The National Planning Commission

(NPC) should enhance its role in preventing corruption and ensuring project viability.

c) Enhance the role of the National Planning Commission (NPC) by providing it with enforcement mechanisms to ensure OMAs and RCs comply with reporting requirements on the progress of capital projects.

6.12. **Audit and Financial Accountability:**

6.12.1. The Office of the Prime Minister, Ministry of Finance and Public Enterprises and Office of the Auditor-General must:

a) Reinforce internal audit mechanisms to better detect and address financial mismanagement, ensuring auditors' independence and providing adequate resources for comprehensive assessments.

b) The Auditor-General should increase oversight of entities with recurring audit issues through more frequent and targeted audits.

c) Implement stricter enforcement of audit submission deadlines to avoid habitual delays, with additional scrutiny for entities that frequently request extensions.

d) Conduct a comprehensive review of audit legislation and practices to close gaps, strengthen enforcement, and promote transparency in public financial management.

e) The Auditor General must propose amendments to the relevant Acts to provide timelines for the submission of financial statements of Local Authorities and put forward the corrective or punitive measures for failure to submit financial statements. This is necessary to address persistent failure to submit reports and financial statements.

f) The Auditor General should propose amendments to its Act to empower them to audit the Procurement Board and Public Enterprises.

6.13. **Direct Auction Proceeds to Vehicle Replacement Account:**

6.13.1. The Ministry of Works and Transport should ensure that revenue generated from the auction of government vehicles is allocated directly to the Vehicle Replacement Account rather than the State Account. This will facilitate the reinvestment of these funds into the acquisition of new vehicles, ensuring the sustainability of the government fleet.

6.14. **Limit Tenure for Occupants of Government Housing:**

6.14.1. The Ministry of Works and Transport should implement a policy that limits the rental tenure for individuals occupying government-owned houses and

flats. This measure will promote the efficient use of government housing resources and ensure that these accommodations serve their intended purpose effectively.
